Summary

Java **Backend Developer** with hands-on production experience in **Spring Boot**, **REST APIs**, and **PostgreSQL**. Built concurrent, production-ready systems at Inentire Technology; solved real-world concurrency challenges in personal projects. Strong foundation in **Data Structures & Algorithms** and full-stack development with **React**.

TECHNICAL SKILLS

Programming Languages: Java, OOP, **Data Structures & Algorithms**

Backend: Spring Boot, Spring MVC, **REST APIs**, JPA/Hibernate, Lombok, Spring AI, Maven

Frontend: HTML, CSS, JavaScript, **React**

Databases: PostgreSQL

DevOps & Tools: Git, GitHub, Postman,Visual Studio Code.

EXPERIENCE

- Designed and implemented REST APIs in Spring Boot to handle form submissions, validate user input, and store data in database.
- Developed Category Management APIs in Spring Boot for an e-commerce application, enabling full CRUD operations for product categories (e.g., T-shirt designs).

PROJECTS

LimeStreet [GitHub] — Java, Spring Boot, PostgreSQL, JPA/Hibernate, Lombok, React

- Created a full-stack clothing e-commerce website using React, Spring Boot, and PostgreSQL, with both frontend and backend modules connected for a complete working system.
- Added OTP-based login and role-based admin/customer access to handle secure authentication and separate user permissions across the platform.
- Built core features such as product listing, sale section, cart, wishlist, and profile management with a responsive user interface for desktop and mobile screens.
- Developed an admin panel to create, edit, and manage products, including support for product images, sizes, colors, categories, and discount details.
